RESTRAINING DEVICES IN BED

WINN'SAVE® RESTRAINING DEVICES IN BEDS, SUBJECT TO MEDICAL PRESCRIPTION, HAVE BEEN SPECIALLY DESIGNED TO RESTRICT FREE MOVEMENT OF PATIENTS WITH ALTERED MENTAL FACULTIES TO PREVENT AND AVOID THE RISK OF FALLING, LIMIT PERIODS OF WANDERING OR ENABLE CARE.

EFFECTIVENESS

▶ WINN'SAVE® restraining devices for use with beds, issued upon medical prescription, have been specially designed to restrict the free movement of patients with altered mental faculties to prevent and avoid the risk of falling, limit periods of wandering or enable treatment to be administered.

SAFETY

- ▶ fabrics have undergone "Fire Retardant" treatment.
- ▶ Compatible with thermal and chemical disinfection.
- ▶ Two closing systems depending on need (Restraint magnets or holding buckle).

RESTRAINING AND SECURING IN BED

WAIST STRAP + PELVIC STRAP

- Indication: medium agitation with risk of falling.
- Properties: restraining a patient lying in bed. Allows the patient to move his/her arms, legs, sit up and turn over. The pelvic strap prevents the patient from sliding down.
- Recommended use: attach to the fixed parts of the bed. Measure the patient's waist circumference before ordering
- ▶ Made of : polyester material. With undergone fire retardant treatment.
- Recommendation: the restraint must be subject to medical prescription and its benefits re-assessed every 24 hours.

2-WRIST STRAP (FASTENING TO THE WAIST BELT)

- > Indication: severe agitation with risk of falling. Agitation and/or physical aggressiveness that cannot be controlled.
- > Properties: restraining the patient in bed with wrist straps; the length may be adjusted to reduce the freedom of arm movement.
- > Recommended use: the 2-wrist strap is used in addition to the waist strap with pelvic strap. It is fastened to the waist
- ▶ Available in one size only
- Made of: polyester material. With undergone fire retardant treatment.
- Recommendation: the restraint must be subject to medical prescription and its benefits re-assessed every 24 hours.

2-WRIST STRAP TO THE FIXED PARTS OF THE BED

- > Indication: severe agitation with risk of falling. Agitation and/or physical aggressiveness that cannot be controlled.
- > Properties: restraining the patient in bed with wrist straps: the length may be adjusted to reduce the freedom of arm movement
- > Recommended use: Attach to the fixed parts of the bed.
- ▶ Available in one size only
- Made of: polyester material. With undergone fire retardant treatment.
- Recommendation: the restraint must be subject to medical prescription and its benefits re-assessed every 24 hours.

SHOULDER AND CHEST STRAP

- Indication: medium agitation with risk of falling.
- > Properties: restraining a patient lying down in bed.
- Recommended use: the shoulder and chest strap is used in addition to the waist strap with pelvic strap.
- Measure the shoulders-chest part before ordering your product. An accessory - extension for shoulder and chest strap - may be added.
- Made of: polyester material. With undergone fire retardant treatment.
- Recommendation: the restraint must be subject to medical prescription and its benefits re-assessed every 24 hours.

UNIVERSAL STRAPS

- > Indication: severe agitation with risk of falling. Agitation and/or physical aggressiveness that cannot be controlled.
- ▶ Properties: restraining a patient lying down in bed.
- Available in one size only
- Made of: polyester material. With undergone fire retardant treatment.
- ▶ Recommendation: the restraint must be subject to medical prescription and

its benefits re-assessed every 24 hours.
